

Freezing & Defrosting Roda Juices

Ordering a lot of juice so that you always have a healthy drink on hand??

Our delicious cold-pressed juices can be frozen for up to six months so you can place juices in your freezer until you are ready to enjoy them!

How to Freeze Cold Pressed Juice

Upon receiving your juices immediately place the juices you will not be consuming in the next three to five days in the freezer. Freezing preserves all the nutrients, enzymes, vitamins, flavor and color while extending shelf life without pasteurization.

How to Defrost Cold-Pressed Juice

You can defrost juice overnight in the fridge so it is ready for you the next day. If you need your juice fast, you can quickly defrost your juice by running the juice bottle under a COLD water bath. After fully defrosted, juices should be consumed within 3-5 days.
